

PASQUAL ARNELLA AND THE ENVIRONMENT

Our raw material, the paper paste, has some excellent environmental qualities, since it is made of recycled newspaper and cardboard.

The work method is also very clean, so we have water closed circuits and natural drying systems

Obviously, the resulting products of this process are also sustainable; recyclables and even biodegradables.

One example is our busts and displays line, the most ecological of the market.

More and more, the companies take in account the environment for their decision-making; we supply products according to their commitments to take respectful actions.

If you want to know more about our production system, do not hesitate to contact us, we will answer all your questions.
